WELCOME!

Track 3: Dissemination and Decision Support Introduction
Track Leads

Chris DeRienzo, MD, MPP
Chief Quality Officer
Mission Health

Julia Skapik, MD, MPH
Chief Health Information Officer
Cognitive Medical Systems
Guidelines for Successful Collaboration

• Be respectful
• Encourage everyone to participate
  • OK if this requires breaking up into smaller groups
• Everyone (not just leads/navigators) can share responsibilities of documentation, time keeping, and staying on task
• Reach out to the Track Leads any time with:
  • Questions about goals and approach
  • Environmental issues (temperature, noise, equipment)
  • Cross-workgroup or track issues
  • Anything else!
Approach to a Productive Working Group

• Identify your group’s stakeholder roles and the primary customer
• If it’s out of scope, move to the general Parking Lot
• Keep track of content for the Report-Outs as you move along
  • Remember to scope your follow up work towards goals that speak to your primary role and your primary customer!
• Move issues out of your control to a separate Parking Lot and identify other representative groups/stakeholders to address later
Workgroup: Data Quality and Validation

Leads:
Wendy Talbot and Suzanne Porter, Directors of Measure Validation at NCQA
Stephanie Rodriguez, Manager of Measure Validation at NCQA

This workgroup will review clinical data layouts from the eye of an auditor, discuss what works and doesn’t work for passing audit, identify how audit guidelines and requirements can be adapted to accommodate the differences in these data compared to traditional claims and medical record data, and collaborate with the Data Quality for Quality Measurement workgroup to see how the two sides work together to meet the needs of both.

Navigators: Sara Vasquez and Caroline Willis
Workgroup: Measure Reporting, Results, and Gaps in Care Dissemination

Leads:

Rick Wilkening, Managing Partner, Trezuno, MiHIN
Bo Borgnakke, Population Health Analyst, MiHIN

This workgroup will discuss Michigan’s efforts and lessons learned in the quality space, including both eCQM and HEDIS measure reporting in traditional and future FHIR environments. This workgroup will collaboratively work to define and improve the Gaps in Care specification and brainstorm additional uses for this information from the patient outcome and population health improvement perspectives.

Navigators: Kristina Salguero and Latasha Estrada
Workgroup: Using CDS to Integrate Measure Capture into Existing Clinician Workflows

Leads:

Claude Nanjo, Research Associate at the University of Utah

Bryn Rhodes, CTO at HarmonIQ

This workgroup will focus on leveraging Clinical Decision Support (CDS) within the clinical workflow to achieve better and less onerous compliance with clinical quality measures. This track recognizes that CDS is only one part of the continuous quality improvement cycle and that CDS solutions must also be considered in conjunction with data analytics. This track will cover the process of translating measure requirements and associated specifications into clinical decision support systems that support these measures and evaluate the current technical and clinical standard landscape facing measure and CDS solution implementers.

Navigators: Howard Follis and Ronke Oyebode
Go Forth and Prosper!

Remember: Stay focused on outcomes, consider the primary and secondary customers and plan for and track next steps as you go along.
