

***Proposed Retirement for HEDIS^{®1} MY 2022:
Comprehensive Diabetes Care (CDC)—HbA1c Testing***
***Proposed Changes to Existing Measure for HEDIS MY 2022:
Comprehensive Diabetes Care (CDC)***

NCQA seeks comments on the proposed retirement of the HEDIS *Comprehensive Diabetes Care (CDC)—HbA1c Testing* indicator, which assesses the percentage of members 18–75 years of age with diabetes (types 1 and 2) who had an HbA1c test performed during the year. NCQA is considering retiring this indicator because it does not assess the test result or the quality of care to address blood sugar control. Additionally, performance on the indicator shows little opportunity for improvement, with rates consistently high (88%–94% from 2017–2019). NCQA recognizes the importance of addressing HbA1c results among patients with diabetes. To assess this component of care, the proposed *HbA1c Control* measure below maintains the indicators for *HbA1c Control* (<8.0%) and *HbA1c Poor Control* (>9.0%).

NCQA also seeks comments on proposed changes to the overall CDC measure set. The current measure set combines five* indicators that assess different components of diabetes care. The measure set assesses the percentage of members 18–75 years of age with diabetes (types 1 and 2) who had each of the following:

- Hemoglobin A1c (HbA1c) testing.
- HbA1c poor control (>9.0%).
- HbA1c control (<8.0%).
- BP control (<140/90 mm Hg).
- Eye exam (retinal) performed.

*The *Medical Attention for Nephropathy* indicator was replaced by the standalone *Kidney Health Evaluation for Patients With Diabetes* measure and will be retired from HEDIS effective MY 2022.

Grouping indicators into one measure set limits the ability to maintain each component more appropriately over time. For example, both the age range and required exclusions apply across the measure set; NCQA is unable to tailor them for each indicator. Additionally, the eye exam indicator is currently the only CDC indicator stratified by socioeconomic status (SES). Maintaining SES stratifications, which are defined at the measure level for HEDIS, is complicated in the combined measure set. It is also challenging to maintain the corresponding electronic clinical quality measures, which are specified as separate diabetes measures. For these reasons, NCQA proposes to separate the indicators into the following three standalone measures:

1. *Hemoglobin A1c Control for Patients With Diabetes (HBD)*: The percentage of members 18–75 years of age with diabetes (types 1 and 2) whose hemoglobin A1c (HbA1c) was at the following levels during the measurement year:
 - HbA1c control (<8.0%).
 - HbA1c poor control (>9.0%).
2. *Eye Exam for Patients With Diabetes (EED)*: The percentage of members 18–75 years of age with diabetes (types 1 and 2) who had a retinal eye exam.
3. *Blood Pressure Control for Patients With Diabetes (BPD)*: The percentage of members 18–75 years of age with diabetes (types 1 and 2) whose blood pressure (BP) was controlled (<140/90mmHg) during the measurement year.

NCQA advisory panels and stakeholders support splitting the CDC indicators and agree it will add value to their long-term maintenance and distinct components of diabetes care. They also support retiring the *HbA1c Testing* indicator and agree that the maintained HbA1c indicators meet the intent for quality measurement of blood sugar control.

Supporting documents include draft measure specifications.

NCQA acknowledges the contributions of the Diabetes and Technical Measurement Advisory Panels.

¹HEDIS[®] is a registered trademark of the National Committee for Quality Assurance (NCQA).

Hemoglobin A1c Control for Patients With Diabetes (HBD)

SUMMARY OF CHANGES TO HEDIS MY 2022

- This measure resulted from the separation of indicators that replaces the former Comprehensive Diabetes Care HEDIS measure.
- Removed the Hemoglobin A1c (HbA1c) Testing indicator.
- Clarified exclusions.

Description

The percentage of members 18–75 years of age with diabetes (types 1 and 2) whose hemoglobin A1c (HbA1c) was at the following levels during the measurement year:

- ~~Hemoglobin A1c (HbA1c) testing.~~
- HbA1c control (<8.0%).
- HbA1c poor control (>9.0%).

Note: Organizations must use the same data collection method (Administrative or Hybrid) to report these indicators.

Eligible Population

~~Note: Members in hospice are excluded from the eligible population. If an organization reports this measure using the Hybrid method, and a member is found to be in hospice or using hospice services during medical record review, the member is removed from the sample and replaced by a member from the oversample. Refer to General Guideline 17: Members in Hospice.~~

Product lines	Commercial, Medicaid, Medicare (report each product line separately).
Ages	18–75 years as of December 31 of the measurement year.
Continuous enrollment	The measurement year.
Allowable gap	No more than one gap in enrollment of up to 45 days during the measurement year. To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the member may not have more than a 1-month gap in coverage (e.g., a member whose coverage lapses for 2 months [60 days] is not considered continuously enrolled).
Anchor date	December 31 of the measurement year.
Benefit	Medical.
Event/diagnosis	There are two ways to identify members with diabetes: by claim/encounter data and by pharmacy data. The organization must use both methods to identify the eligible population, but a member only needs to be identified by one method to be included in the measure. Members may be identified as having diabetes during the measurement year or the year prior to the measurement year.

Claim/encounter data. Members who met any of the following criteria during the measurement year or the year prior to the measurement year (count services that occur over both years):

- At least one acute inpatient encounter (Acute Inpatient Value Set) with a diagnosis of diabetes (Diabetes Value Set) **without** telehealth (Telehealth Modifier Value Set; Telehealth POS Value Set).
- At least one acute inpatient discharge with a diagnosis of diabetes (Diabetes Value Set) on the discharge claim. To identify an acute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Exclude nonacute inpatient stays (Nonacute Inpatient Stay Value Set).
 3. Identify the discharge date for the stay.
- At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set), telephone visits (Telephone Visits Value Set), e-visits or virtual check-ins (Online Assessments Value Set), ED visits (ED Value Set), nonacute inpatient encounters (Nonacute Inpatient Value Set) or nonacute inpatient discharges (instructions below; the diagnosis must be on the discharge claim), on different dates of service, with a diagnosis of diabetes (Diabetes Value Set). Visit type need not be the same for the two encounters. To identify a nonacute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Confirm the stay was for nonacute care based on the presence of a nonacute code (Nonacute Inpatient Stay Value Set) on the claim.
 3. Identify the discharge date for the stay.Only include nonacute inpatient encounters (Nonacute Inpatient Value Set) **without** telehealth (Telehealth Modifier Value Set; Telehealth POS Value Set).

Pharmacy data. Members who were dispensed insulin or hypoglycemics/ antihyperglycemics on an ambulatory basis during the measurement year or the year prior to the measurement year (Diabetes Medications List).

Diabetes Medications

Description	Prescription		
Alpha-glucosidase inhibitors	• Acarbose	• Miglitol	
Amylin analogs	• Pramlintide		
Antidiabetic combinations	• Alogliptin-metformin • Alogliptin-pioglitazone • Canagliflozin-metformin • Dapagliflozin-metformin • Empagliflozin-linagliptin	• Empagliflozin-metformin • Glimepiride-pioglitazone • Glipizide-metformin • Glyburide-metformin • Linagliptin-metformin	• Metformin-pioglitazone • Metformin-repaglinide • Metformin-rosiglitazone • Metformin-saxagliptin • Metformin-sitagliptin
Insulin	• Insulin aspart • Insulin aspart-insulin aspart protamine • Insulin degludec • Insulin detemir • Insulin glargine • Insulin glulisine	• Insulin isophane human • Insulin isophane-insulin regular • Insulin lispro • Insulin lispro-insulin lispro protamine • Insulin regular human • Insulin human inhaled	
Meglitinides	• Nateglinide	• Repaglinide	
Glucagon-like peptide-1 (GLP1) agonists	• Albiglutide • Dulaglutide • Exenatide	• Liraglutide (excluding Saxenda®) • Semaglutide	
Sodium glucose cotransporter 2 (SGLT2) inhibitor	• Canagliflozin	• Dapagliflozin (excluding Farxiga®)	• Empagliflozin
Sulfonylureas	• Chlorpropamide • Glimepiride	• Glipizide • Glyburide	• Tolazamide • Tolbutamide
Thiazolidinediones	• Pioglitazone	• Rosiglitazone	
Dipeptidyl peptidase-4 (DDP-4) inhibitors	• Alogliptin • Linagliptin	• Saxagliptin • Sitagliptin	

Note: *Glucophage/metformin as a solo agent is not included because it is used to treat conditions other than diabetes; members with diabetes on these medications are identified through diagnosis codes only.*

**Required
exclusions**

Exclude members who meet any of the following criteria:

- Members who do not have a diagnosis of diabetes (Diabetes Value Set), in any setting, during the measurement year or the year prior to the measurement year **and** who had a diagnosis of polycystic ovarian syndrome, gestational diabetes or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year.
- Members in hospice are excluded from the eligible population. Refer to *General Guideline 17: Members in Hospice*.
- Members receiving palliative care (Palliative Care Assessment Value Set; Palliative Care Encounter Value Set; Palliative Care Intervention Value Set) during the measurement year.

**Required
exclusion**

Exclude members receiving palliative care (Palliative Care Assessment Value Set; Palliative Care Encounter Value Set; Palliative Care Intervention Value Set) during the measurement year.

Exclusions

Exclude members who meet any of the following criteria:

Note: *Supplemental and medical record data may not be used for these exclusions.*

- Medicare members 66 years of age and older as of December 31 of the measurement year who meet either of the following:
 - Enrolled in an Institutional SNP (I-SNP) any time during the measurement year.
 - Living long-term in an institution any time during the measurement year as identified by the LTI flag in the Monthly Membership Detail Data File. Use the run date of the file to determine if a member had an LTI flag during the measurement year.
- Members 66 years of age and older as of December 31 of the measurement year (all product lines) with frailty **and** advanced illness. Members must meet **BOTH** of the following frailty and advanced illness criteria to be excluded:
 1. At least one claim/encounter for frailty (Frailty Device Value Set; Frailty Diagnosis Value Set; Frailty Encounter Value Set; Frailty Symptom Value Set) during the measurement year.
 2. Any of the following during the measurement year or the year prior to the measurement year (count services that occur over both years):
 - At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set), ED visits (ED Value Set), telephone visits (Telephone Visits Value Set), e-visits or virtual check-ins (Online Assessments Value Set), nonacute inpatient encounters (Nonacute Inpatient Value Set) or nonacute inpatient discharges (instructions below; the diagnosis must be on the discharge claim) on different dates of service, with an advanced illness diagnosis (Advanced Illness Value Set). Visit type need not be the same for the two visits. To identify a nonacute inpatient discharge:

1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
2. Confirm the stay was for nonacute care based on the presence of a nonacute code (Nonacute Inpatient Stay Value Set) on the claim.
3. Identify the discharge date for the stay.
 - At least one acute inpatient encounter (Acute Inpatient Value Set) with an advanced illness diagnosis (Advanced Illness Value Set).
 - At least one acute inpatient discharge with an advanced illness diagnosis (Advanced Illness Value Set) on the discharge claim. To identify an acute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Exclude nonacute inpatient stays (Nonacute Inpatient Stay Value Set).
 3. Identify the discharge date for the stay.
 - A dispensed dementia medication (Dementia Medications List).

Dementia Medications

Description	Prescription
Cholinesterase inhibitors	• Donepezil • Galantamine • Rivastigmine
Miscellaneous central nervous system agents	• Memantine
Dementia combinations	• Donepezil-memantine

Administrative Specification

Denominator The eligible population.

Numerators

HbA1c Testing ~~An HbA1c test (HbA1c Lab Test Value Set; HbA1c Test Result or Finding Value Set) performed during the measurement year.~~

HbA1c Control <8% Use codes (HbA1c Lab Test Value Set; HbA1c Test Result or Finding Value Set) to identify the most recent HbA1c test during the measurement year. The member is numerator compliant if the most recent HbA1c level is <8.0%. The member is not numerator compliant if the result for the most recent HbA1c test is ≥8.0% or is missing a result, or if an HbA1c test was not done during the measurement year.

Organizations that use CPT Category II codes to identify numerator compliance for this indicator must search for all codes in the following value sets and use the most recent code during the measurement year to evaluate whether the member is numerator compliant.

Value Set	Numerator Compliance
<u>HbA1c Level Less Than 7.0 Value Set</u>	Compliant
<u>HbA1c Level Greater Than or Equal To 7.0 and Less Than 8.0 Value Set</u>	Compliant
<u>HbA1c Level Greater Than or Equal To 8.0 and Less Than or Equal To 9.0 Value Set</u>	Not compliant
<u>HbA1c Level Greater Than 9.0 Value Set</u>	Not compliant

HbA1c Poor Control >9% Use codes (HbA1c Lab Test Value Set; HbA1c Test Result or Finding Value Set) to identify the *most recent* HbA1c test during the measurement year. The member is numerator compliant if the most recent HbA1c level is >9.0% or is missing a result, or if an HbA1c test was not done during the measurement year. The member is not numerator compliant if the result for the most recent HbA1c test during the measurement year is ≤9.0%.

Organizations that use CPT Category II codes to identify numerator compliance for this indicator must search for all codes in the following value sets and use the most recent code during the measurement year to evaluate whether the member is numerator compliant.

Value Set	Numerator Compliance
<u>HbA1c Level Less Than 7.0 Value Set</u>	Not compliant
<u>HbA1c Level Greater Than or Equal To 7.0 and Less Than 8.0 Value Set</u>	Not compliant
<u>HbA1c Level Greater Than or Equal To 8.0 and Less Than or Equal To 9.0 Value Set</u>	Not compliant
<u>HbA1c Level Greater Than 9.0 Value Set</u>	Compliant

Note: A lower rate indicates better performance for this indicator (i.e., low rates of poor control indicate better care).

Exclusions (optional)

~~Members who do not have a diagnosis of diabetes (Diabetes Value Set), in any setting, during the measurement year or the year prior to the measurement year **and** who had a diagnosis of polycystic ovarian syndrome, gestational diabetes or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year.~~

~~If the member was included in the measure based on claim or encounter data, as described in the event/diagnosis criteria, the optional exclusions do not apply because the member had a diagnosis of diabetes.~~

Hybrid Specification

Denominator

A systematic sample drawn from the eligible population.

Organizations that use the Hybrid Method to report the Hemoglobin A1c Control for Patients With Diabetes (HBD), Eye Exam Performed for Patients With Diabetes (EED) and Blood Pressure Control for Patients With Diabetes (BPD) measures may use the same sample for all three measures.

Organizations may reduce the sample size based on the current year's administrative rate or the prior year's audited, product line-specific rate for the lowest rate of all HBD indicators, EED and BPD measures.

If separate samples are used for the HBD, EED and BPD measures, organizations may reduce the sample based on the product line-specific current measurement year's administrative rate or the prior year's audited, product line-specific rate for the measure.

Refer to the *Guidelines for Calculations and Sampling* for information on reducing sample size.

Numerators

~~**HbA1c Testing** An HbA1c test performed during the measurement year as identified by administrative data or medical record review.~~

~~**Administrative** Refer to *Administrative Specification* to identify positive numerator hits from administrative data.~~

~~**Medical record** At a minimum, documentation in the medical record must include a note indicating the date when the HbA1c test was performed and the result or finding. Count notation of the following in the medical record:~~

- ~~• A1c~~
- ~~• HbA1c~~
- ~~• HgbA1c~~
- ~~• HB1c~~
- ~~• Hemoglobin A1c~~
- ~~• Glycohemoglobin A1c~~
- ~~• Glycohemoglobin~~
- ~~• Glycated hemoglobin~~
- ~~• Glycosylated hemoglobin~~

HbA1c Control <8% The *most recent* HbA1c level (performed during the measurement year) is <8.0% as identified by laboratory data or medical record review.

Administrative Refer to *Administrative Specification* to identify positive numerator hits from administrative data.

Medical record At a minimum, documentation in the medical record must include a note indicating the date when the HbA1c test was performed and the result. The member is numerator compliant if the most recent HbA1c level during the measurement year is <8.0%. The member is not numerator compliant if the result for the most recent HbA1c level during the measurement year is ≥8.0% or is missing, or if an HbA1c test was not performed during the measurement year.

Ranges and thresholds do not meet criteria for this indicator. A distinct numeric result is required for numerator compliance.

HbA1c Poor Control >9% The *most recent* HbA1c level (performed during the measurement year) is >9.0% or is missing, or was not done during the measurement year, as documented through laboratory data or medical record review.

Note: A lower rate indicates better performance for this indicator (i.e., low rates of poor control indicate better care).

Administrative Refer to *Administrative Specification* to identify positive numerator hits from administrative data.

Medical record At a minimum, documentation in the medical record must include a note indicating the date when the HbA1c test was performed and the result. The member is numerator compliant if the result for the most recent HbA1c level during the measurement year is >9.0% or is missing, or if an HbA1c test was not done during the measurement year. The member is not numerator compliant if the most recent HbA1c level during the measurement year is ≤9.0%.

Ranges and thresholds do not meet criteria for this indicator. A distinct numeric result is required for numerator compliance.

Exclusions (optional)

~~Refer to *Administrative Specification* for exclusion criteria. Identify members who did not have a diagnosis of diabetes, in any setting, during the measurement year or the year prior to the measurement year, **and** who had a diagnosis of gestational diabetes or steroid-induced diabetes, in any setting, during the measurement year or the year prior to the measurement year.~~

Note

- ~~• If an organization chooses to apply the optional exclusions, members must be numerator negative for at least one indicator, with the exception of HbA1c Poor Control (>9%). Remove members from the eligible population who are numerator negative for any indicator (other than for HbA1c Poor Control [>9%]) and substitute members from the oversample. Do not exclude members who are numerator compliant for all indicators except HbA1c Poor Control (>9%), because a lower rate indicates better performance for this indicator.~~
- If a combination of administrative, supplemental or hybrid data are used, the most recent HbA1c result must be used, regardless of data source.

Data Elements for Reporting

Organizations that submit HEDIS data to NCQA must provide the following data elements.

Table HBD-1/2/3: Data Elements for Hemoglobin A1c Control for Patients With Diabetes

	Administrative	Hybrid
Measurement year	✓	✓
Data collection methodology (Administrative or Hybrid)	✓	✓
Eligible population	✓	✓
Number of required exclusions	✓	✓
Number of numerator events by administrative data in eligible population (before exclusions)		<i>Each of the 2 rates</i>
Current year's administrative rate (before exclusions)		<i>Each of the 2 rates</i>
Minimum required sample size (MRSS)		✓
Oversampling rate		✓
Number of oversample records		✓
Number of medical records excluded because of valid data errors		✓
Number of administrative data records excluded		✓
Number of medical records excluded		✓
Number of employee/dependent medical records excluded		✓
Records added from the oversample list		✓
Denominator		✓
Numerator events by administrative data	<i>Each of the 2 rates</i>	<i>Each of the 2 rates</i>
Numerator events by medical records		<i>Each of the 2 rates</i>

Eye Exam for Patients With Diabetes (EED)

SUMMARY OF CHANGES TO HEDIS MY 2022

- This measure resulted from the separation of indicators that replaces the former Comprehensive Diabetes Care HEDIS measure.
- Updated the Administrative Specification logic and value sets.
- Clarified exclusions.

Description

The percentage of members 18–75 years of age with diabetes (types 1 and 2) who had a retinal eye exam.

Eligible Population

~~**Note:** Members in hospice are excluded from the eligible population. If an organization reports this measure using the Hybrid method, and a member is found to be in hospice or using hospice services during medical record review, the member is removed from the sample and replaced by a member from the oversample. Refer to General Guideline 17: Members in Hospice.~~

Product lines Commercial, Medicaid, Medicare (report each product line separately).

Stratification For only Medicare, report the following SES stratifications and total:

- Non-LIS/DE, Nondisability.
- LIS/DE.
- Disability.
- LIS/DE and Disability.
- Other.
- Unknown.
- Total Medicare.

Note: The stratifications are mutually exclusive and the sum of all six stratifications is the total population. The stratifications are reported in a separate table.

Ages 18–75 years as of December 31 of the measurement year.

Continuous enrollment The measurement year.

Allowable gap No more than one gap in enrollment of up to 45 days during the measurement year. To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the member may not have more than a 1-month gap in coverage (e.g., a member whose coverage lapses for 2 months [60 days] is not considered continuously enrolled).

Anchor date December 31 of the measurement year.

Benefit Medical.

Event/diagnosis There are two ways to identify members with diabetes: by claim/encounter data and by pharmacy data. The organization must use both methods to identify the eligible population, but a member only needs to be identified by one method to be included in the measure. Members may be identified as having diabetes during the measurement year or the year prior to the measurement year.

Claim/encounter data. Members who met any of the following criteria during the measurement year or the year prior to the measurement year (count services that occur over both years):

- At least one acute inpatient encounter (Acute Inpatient Value Set) with a diagnosis of diabetes (Diabetes Value Set) **without** telehealth (Telehealth Modifier Value Set; Telehealth POS Value Set).
- At least one acute inpatient discharge with a diagnosis of diabetes (Diabetes Value Set) on the discharge claim. To identify an acute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Exclude nonacute inpatient stays (Nonacute Inpatient Stay Value Set).
 3. Identify the discharge date for the stay.
- At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set), telephone visits (Telephone Visits Value Set), e-visits or virtual check-ins (Online Assessments Value Set), ED visits (ED Value Set), nonacute inpatient encounters (Nonacute Inpatient Value Set) or nonacute inpatient discharges (instructions below; the diagnosis must be on the discharge claim), on different dates of service, with a diagnosis of diabetes (Diabetes Value Set). Visit type need not be the same for the two encounters. To identify a nonacute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Confirm the stay was for nonacute care based on the presence of a nonacute code (Nonacute Inpatient Stay Value Set) on the claim.
 3. Identify the discharge date for the stay.Only include nonacute inpatient encounters (Nonacute Inpatient Value Set) **without** telehealth (Telehealth Modifier Value Set; Telehealth POS Value Set).
- *Pharmacy data.* Members who were dispensed insulin or hypoglycemics/antihyperglycemics on an ambulatory basis during the measurement year or the year prior to the measurement year (Diabetes Medications List).

Diabetes Medications

Description	Prescription		
Alpha-glucosidase inhibitors	• Acarbose	• Miglitol	
Amylin analogs	• Pramlintide		
Antidiabetic combinations	• Alogliptin-metformin • Alogliptin-pioglitazone • Canagliflozin-metformin • Dapagliflozin-metformin • Empagliflozin-linagliptin	• Empagliflozin-metformin • Glimepiride-pioglitazone • Glipizide-metformin • Glyburide-metformin • Linagliptin-metformin	• Metformin-pioglitazone • Metformin-repaglinide • Metformin-rosiglitazone • Metformin-saxagliptin • Metformin-sitagliptin
Insulin	• Insulin aspart • Insulin aspart-insulin aspart protamine • Insulin degludec • Insulin detemir • Insulin glargine • Insulin glulisine	• Insulin isophane human • Insulin isophane-insulin regular • Insulin lispro • Insulin lispro-insulin lispro protamine • Insulin regular human • Insulin human inhaled	
Meglitinides	• Nateglinide	• Repaglinide	
Glucagon-like peptide-1 (GLP1) agonists	• Albiglutide • Dulaglutide • Exenatide	• Liraglutide (excluding Saxenda®) • Semaglutide	
Sodium glucose cotransporter 2 (SGLT2) inhibitor	• Canagliflozin	• Dapagliflozin (excluding Farxiga®)	• Empagliflozin
Sulfonylureas	• Chlorpropamide • Glimepiride	• Glipizide • Glyburide	• Tolazamide • Tolbutamide
Thiazolidinediones	• Pioglitazone	• Rosiglitazone	
Dipeptidyl peptidase-4 (DDP-4) inhibitors	• Alogliptin • Linagliptin	• Saxagliptin • Sitagliptin	

Note: *Glucophage/metformin as a solo agent is not included because it is used to treat conditions other than diabetes; members with diabetes on these medications are identified through diagnosis codes only.*

**Required
exclusions**

Exclude members who meet any of the following criteria:

- Members who do not have a diagnosis of diabetes (Diabetes Value Set), in any setting, during the measurement year or the year prior to the measurement year **and** who had a diagnosis of polycystic ovarian syndrome, gestational diabetes or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year.
- Members in hospice are excluded from the eligible population. Refer to *General Guideline 17: Members in Hospice*.
- Members receiving palliative care (Palliative Care Assessment Value Set; Palliative Care Encounter Value Set; Palliative Care Intervention Value Set) during the measurement year.

**Required
exclusion**

~~Exclude members receiving palliative care (Palliative Care Assessment Value Set; Palliative Care Encounter Value Set; Palliative Care Intervention Value Set) during the measurement year.~~

Exclusions

Exclude members who meet any of the following criteria:

Note: *Supplemental and medical record data may not be used for these exclusions.*

- Medicare members 66 years of age and older as of December 31 of the measurement year who meet either of the following:
 - Enrolled in an Institutional SNP (I-SNP) any time during the measurement year.
 - Living long-term in an institution any time during the measurement year as identified by the LTI flag in the Monthly Membership Detail Data File. Use the run date of the file to determine if a member had an LTI flag during the measurement year.
- Members 66 years of age and older as of December 31 of the measurement year (all product lines) with frailty **and** advanced illness. Members must meet **BOTH** of the following frailty and advanced illness criteria to be excluded:
 1. At least one claim/encounter for frailty (Frailty Device Value Set; Frailty Diagnosis Value Set; Frailty Encounter Value Set; Frailty Symptom Value Set) during the measurement year.
 2. Any of the following during the measurement year or the year prior to the measurement year (count services that occur over both years):
 - At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set), ED visits (ED Value Set), telephone visits (Telephone Visits Value Set), e-visits or virtual check-ins (Online Assessments Value Set), nonacute inpatient encounters (Nonacute Inpatient Value Set) or nonacute inpatient discharges (instructions below; the diagnosis must be on the discharge claim) on different dates of service, with an advanced illness diagnosis (Advanced Illness Value Set). Visit type need not be the same for the two visits. To identify a nonacute inpatient discharge:

1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
2. Confirm the stay was for nonacute care based on the presence of a nonacute code (Nonacute Inpatient Stay Value Set) on the claim.
3. Identify the discharge date for the stay.
 - At least one acute inpatient encounter (Acute Inpatient Value Set) with an advanced illness diagnosis (Advanced Illness Value Set).
 - At least one acute inpatient discharge with an advanced illness diagnosis (Advanced Illness Value Set) on the discharge claim. To identify an acute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Exclude nonacute inpatient stays (Nonacute Inpatient Stay Value Set).
 3. Identify the discharge date for the stay.
 - A dispensed dementia medication (Dementia Medications List).

Dementia Medications

Description	Prescription
Cholinesterase inhibitors	• Donepezil • Galantamine • Rivastigmine
Miscellaneous central nervous system agents	• Memantine
Dementia combinations	• Donepezil-memantine

Administrative Specification

Denominator The eligible population.

Numerator

Screening or monitoring for diabetic retinal disease as identified by administrative data. This includes diabetics who had one of the following:

- A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year.
- A *negative* retinal or dilated eye exam (negative for retinopathy) by an eye care professional in the year prior to the measurement year.
- Bilateral eye enucleation any time during the member’s history through December 31 of the measurement year.

Any of the following meet criteria:

- Any code in the Diabetic Retinal Screening Value Set billed by an eye care professional (optometrist or ophthalmologist) during the measurement year.
- ~~Any code in the Diabetic Retinal Screening Value Set billed by an eye care professional (optometrist or ophthalmologist) during the year prior to the measurement year, with a negative result (negative for retinopathy).~~

- Any code in the Diabetic Retinal Screening Value Set billed by an eye care professional (optometrist or ophthalmologist) during the year prior to the measurement year, with a diagnosis of diabetes without complications (Diabetes Mellitus Without Complications Value Set).
- Any code in the Eye Exam With Evidence of Retinopathy Value Set, or Eye Exam Without Evidence of Retinopathy Value Set or Automated Eye Exam Value Set billed by any provider type during the measurement year.
- Any code in the Eye Exam Without Evidence of Retinopathy Value Set billed by any provider type during the year prior to the measurement year.
- Any code in the Diabetic Retinal Screening Negative In Prior Year Value Set billed by any provider type during the measurement year.
- Unilateral eye enucleation (Unilateral Eye Enucleation Value Set) **with** a bilateral modifier (Bilateral Modifier Value Set).
- Two unilateral eye enucleations (Unilateral Eye Enucleation Value Set) with service dates 14 days or more apart. For example, if the service date for the first unilateral eye enucleation was February 1 of the measurement year, the service date for the second unilateral eye enucleation must be on or after February 15.
- Left unilateral eye enucleation (Unilateral Eye Enucleation Left Value Set) **and** right unilateral eye enucleation (Unilateral Eye Enucleation Right Value Set) on the same or different dates of service.
- A unilateral eye enucleation (Unilateral Eye Enucleation Value Set) and a left unilateral eye enucleation (Unilateral Eye Enucleation Left Value Set) with service dates 14 days or more apart.
- A unilateral eye enucleation (Unilateral Eye Enucleation Value Set) and a right unilateral eye enucleation (Unilateral Eye Enucleation Right Value Set) with service dates 14 days or more apart.

Exclusions (optional)

~~Members who do not have a diagnosis of diabetes (Diabetes Value Set), in any setting, during the measurement year or the year prior to the measurement year **and** who had a diagnosis of polycystic ovarian syndrome, gestational diabetes or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year.~~

~~If the member was included in the measure based on claim or encounter data, as described in the event/diagnosis criteria, the optional exclusions do not apply because the member had a diagnosis of diabetes.~~

Hybrid Specification

Denominator

A systematic sample drawn from the eligible population.

For Medicare reporting, the denominator for the Total Medicare SES stratification is the entire systematic sample. Do not pull samples for each stratification. The individual stratifications for the denominators and all numerators must sum to the total.

Organizations that use the Hybrid Method to report the Hemoglobin A1c Control for Patients With Diabetes (HBD), Eye Exam Performed for Patients With Diabetes (EED) and Blood Pressure Control for Patients With Diabetes (BPD) measures may use the same sample for all three measures.

Organizations may reduce the sample size based on the current year's administrative rate or the prior year's audited, product line-specific rate for the lowest rate of all HBD indicators, EED and BPD measures.

If separate samples are used for the HBD, EED and BPD measures, organizations may reduce the sample based on the product line-specific current measurement year's administrative rate or the prior year's audited, product line-specific rate for the measure.

Refer to the *Guidelines for Calculations and Sampling* for information on reducing sample size.

Numerator

Screening or monitoring for diabetic retinal disease as identified by administrative data or medical record review. This includes diabetics who had one of the following:

- A retinal or dilated eye exam by an eye care professional (optometrist or ophthalmologist) in the measurement year.
- A *negative* retinal or dilated exam (negative for retinopathy) by an eye care professional (optometrist or ophthalmologist) in the year prior to the measurement year.
- Bilateral eye enucleation any time during the member's history through December 31 of the measurement year.

Administrative

Refer to *Administrative Specification* to identify positive numerator hits from administrative data.

Medical record

At a minimum, documentation in the medical record must include one of the following:

- A note or letter prepared by an ophthalmologist, optometrist, PCP or other health care professional indicating that an ophthalmoscopic exam was completed by an eye care professional (optometrist or ophthalmologist), the date when the procedure was performed and the results.
- A chart or photograph indicating the date when the fundus photography was performed and one of the following:

- Evidence that an eye care professional (optometrist or ophthalmologist) reviewed the results.
- Evidence results were read by a qualified reading center that operates under the direction of a medical director who is a retinal specialist.
- Evidence results were read by a system that provides an artificial intelligence (AI) interpretation.
- Evidence that the member had bilateral eye enucleation or acquired absence of both eyes. Look as far back as possible in the member’s history through December 31 of the measurement year.
- Documentation of a negative retinal or dilated exam by an eye care professional (optometrist or ophthalmologist) in the year prior to the measurement year, where results indicate retinopathy was not present (e.g., documentation of normal findings).
 - Documentation does not have to state specifically “no diabetic retinopathy” to be considered negative for retinopathy; however, it must be clear that the patient had a dilated or retinal eye exam by an eye care professional (optometrist or ophthalmologist) and that retinopathy was not present. Notation limited to a statement that indicates “diabetes without complications” does not meet criteria.

Exclusions (optional)

~~Refer to *Administrative Specification* for exclusion criteria. Identify members who did not have a diagnosis of diabetes, in any setting, during the measurement year or the year prior to the measurement year, **and** who had a diagnosis of gestational diabetes or steroid-induced diabetes, in any setting, during the measurement year or the year prior to the measurement year.~~

Note

- ~~• If an organization chooses to apply the optional exclusions, members must be numerator negative for at least one indicator, with the exception of HbA1c Poor Control (>9%). Remove members from the eligible population who are numerator negative for any indicator (other than for HbA1c Poor Control [>9%]) and substitute members from the oversample. Do not exclude members who are numerator compliant for all indicators except HbA1c Poor Control (>9%), because a lower rate indicates better performance for this indicator.~~
- Blindness is not an exclusion for a diabetic eye exam because it is difficult to distinguish between individuals who are legally blind but require a retinal exam and those who are completely blind and therefore do not require an exam.
- Hypertensive retinopathy is not handled differently from diabetic retinopathy when reporting this measure; for example, an eye exam documented as positive for hypertensive retinopathy is counted as positive for diabetic retinopathy and an eye exam documented as negative for hypertensive retinopathy is counted as negative for diabetic retinopathy. The intent of this measure is to ensure that members with evidence of any type of retinopathy have an eye exam annually, while members who remain free of retinopathy (i.e., the retinal exam was negative for retinopathy) are screened every other year.

Data Elements for Reporting

Organizations that submit HEDIS data to NCQA must provide the following data elements.

Table EED-1/2: Data Elements for Eye Exam Performed for Patients with Diabetes

	Administrative	Hybrid
Measurement year	✓	✓
Data collection methodology (Administrative or Hybrid)	✓	✓
Eligible population	✓	✓
Number of required exclusions	✓	✓
Number of numerator events by administrative data in eligible population (before exclusions)		✓
Current year's administrative rate (before exclusions)		✓
Minimum required sample size (MRSS)		✓
Oversampling rate		✓
Number of oversample records		✓
Number of medical records excluded because of valid data errors		✓
Number of administrative data records excluded		✓
Number of medical records excluded		✓
Number of employee/dependent medical records excluded		✓
Records added from the oversample list		✓
Denominator		✓
Numerator events by administrative data	✓	✓
Numerator events by medical records		✓
Numerator events by supplemental data	✓	✓
Reported rate	✓	✓

Blood Pressure Control for Patients With Diabetes (BPD)

SUMMARY OF CHANGES TO HEDIS MY 2022

- This measure resulted from the separation of indicators that replaces the former Comprehensive Diabetes Care HEDIS measure.
- Updated the Administrative Specification to make it consistent with the Hybrid Specification; replaced the visit type requirement with a visit type exclusion.
- Clarified exclusions.

Description

The percentage of members 18–75 years of age with diabetes (types 1 and 2) whose blood pressure (BP) was controlled (<140/90 mm Hg) during the measurement year.

Eligible Population

~~**Note:** Members in hospice are excluded from the eligible population. If an organization reports this measure using the Hybrid method, and a member is found to be in hospice or using hospice services during medical record review, the member is removed from the sample and replaced by a member from the oversample. Refer to General Guideline 17: Members in Hospice.~~

Product lines	Commercial, Medicaid, Medicare (report each product line separately).
Ages	18–75 years as of December 31 of the measurement year.
Continuous enrollment	The measurement year.
Allowable gap	No more than one gap in enrollment of up to 45 days during the measurement year. To determine continuous enrollment for a Medicaid beneficiary for whom enrollment is verified monthly, the member may not have more than a 1-month gap in coverage (e.g., a member whose coverage lapses for 2 months [60 days] is not considered continuously enrolled).
Anchor date	December 31 of the measurement year.
Benefit	Medical.
Event/diagnosis	There are two ways to identify members with diabetes: by claim/encounter data and by pharmacy data. The organization must use both methods to identify the eligible population, but a member only needs to be identified by one method to be included in the measure. Members may be identified as having diabetes during the measurement year or the year prior to the measurement year.

Claim/encounter data. Members who met any of the following criteria during the measurement year or the year prior to the measurement year (count services that occur over both years):

- At least one acute inpatient encounter (Acute Inpatient Value Set) with a diagnosis of diabetes (Diabetes Value Set) **without** telehealth (Telehealth Modifier Value Set; Telehealth POS Value Set).
- At least one acute inpatient discharge with a diagnosis of diabetes (Diabetes Value Set) on the discharge claim. To identify an acute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Exclude nonacute inpatient stays (Nonacute Inpatient Stay Value Set).
 3. Identify the discharge date for the stay.
- At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set), telephone visits (Telephone Visits Value Set), e-visits or virtual check-ins (Online Assessments Value Set), ED visits (ED Value Set), nonacute inpatient encounters (Nonacute Inpatient Value Set) or nonacute inpatient discharges (instructions below; the diagnosis must be on the discharge claim), on different dates of service, with a diagnosis of diabetes (Diabetes Value Set). Visit type need not be the same for the two encounters. To identify a nonacute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Confirm the stay was for nonacute care based on the presence of a nonacute code (Nonacute Inpatient Stay Value Set) on the claim.
 3. Identify the discharge date for the stay.Only include nonacute inpatient encounters (Nonacute Inpatient Value Set) **without** telehealth (Telehealth Modifier Value Set; Telehealth POS Value Set).

Pharmacy data. Members who were dispensed insulin or hypoglycemics/ antihyperglycemics on an ambulatory basis during the measurement year or the year prior to the measurement year (Diabetes Medications List).

Diabetes Medications

Description	Prescription		
Alpha-glucosidase inhibitors	• Acarbose	• Miglitol	
Amylin analogs	• Pramlintide		
Antidiabetic combinations	• Alogliptin-metformin • Alogliptin-pioglitazone • Canagliflozin-metformin • Dapagliflozin-metformin • Empagliflozin-linagliptin	• Empagliflozin-metformin • Glimepiride-pioglitazone • Glipizide-metformin • Glyburide-metformin • Linagliptin-metformin	• Metformin-pioglitazone • Metformin-repaglinide • Metformin-rosiglitazone • Metformin-saxagliptin • Metformin-sitagliptin
Insulin	• Insulin aspart • Insulin aspart-insulin aspart protamine • Insulin degludec • Insulin detemir • Insulin glargine • Insulin glulisine	• Insulin isophane human • Insulin isophane-insulin regular • Insulin lispro • Insulin lispro-insulin lispro protamine • Insulin regular human • Insulin human inhaled	
Meglitinides	• Nateglinide	• Repaglinide	
Glucagon-like peptide-1 (GLP1) agonists	• Albiglutide • Dulaglutide • Exenatide	• Liraglutide (excluding Saxenda®) • Semaglutide	
Sodium glucose cotransporter 2 (SGLT2) inhibitor	• Canagliflozin	• Dapagliflozin (excluding Farxiga®)	• Empagliflozin
Sulfonylureas	• Chlorpropamide • Glimepiride	• Glipizide • Glyburide	• Tolazamide • Tolbutamide
Thiazolidinediones	• Pioglitazone	• Rosiglitazone	
Dipeptidyl peptidase-4 (DDP-4) inhibitors	• Alogliptin • Linagliptin	• Saxagliptin • Sitagliptin	

Note: *Glucophage/metformin as a solo agent is not included because it is used to treat conditions other than diabetes; members with diabetes on these medications are identified through diagnosis codes only.*

**Required
exclusions**

Members who do not have a diagnosis of diabetes (Diabetes Value Set), in any setting, during the measurement year or the year prior to the measurement year **and** who had a diagnosis of polycystic ovarian syndrome, gestational diabetes or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year.

Members in hospice are excluded from the eligible population. Refer to *General Guideline 17: Members in Hospice*.

Members receiving palliative care (Palliative Care Assessment Value Set; Palliative Care Encounter Value Set; Palliative Care Intervention Value Set) during the measurement year are excluded from the eligible population.

**Required
exclusion**

Exclude members receiving palliative care (Palliative Care Assessment Value Set; Palliative Care Encounter Value Set; Palliative Care Intervention Value Set) during the measurement year.

Exclusions

Exclude members who meet any of the following criteria:

Note: *Supplemental and medical record data may not be used for these exclusions.*

- Medicare members 66 years of age and older as of December 31 of the measurement year who meet either of the following:
 - Enrolled in an Institutional SNP (I-SNP) any time during the measurement year.
 - Living long-term in an institution any time during the measurement year as identified by the LTI flag in the Monthly Membership Detail Data File. Use the run date of the file to determine if a member had an LTI flag during the measurement year.
- Members 66 years of age and older as of December 31 of the measurement year (all product lines) with frailty **and** advanced illness. Members must meet **BOTH** of the following frailty and advanced illness criteria to be excluded:
 1. At least one claim/encounter for frailty (Frailty Device Value Set; Frailty Diagnosis Value Set; Frailty Encounter Value Set; Frailty Symptom Value Set) during the measurement year.
 2. Any of the following during the measurement year or the year prior to the measurement year (count services that occur over both years):
 - At least two outpatient visits (Outpatient Value Set), observation visits (Observation Value Set), ED visits (ED Value Set), telephone visits (Telephone Visits Value Set), e-visits or virtual check-ins (Online Assessments Value Set), nonacute inpatient encounters (Nonacute Inpatient Value Set) or nonacute inpatient discharges (instructions below; the diagnosis must be on the discharge claim) on different dates of service, with an advanced illness diagnosis (Advanced Illness Value Set). Visit type need not be the same for the two visits. To identify a nonacute inpatient discharge:

1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
2. Confirm the stay was for nonacute care based on the presence of a nonacute code (Nonacute Inpatient Stay Value Set) on the claim.
3. Identify the discharge date for the stay.
 - At least one acute inpatient encounter (Acute Inpatient Value Set) with an advanced illness diagnosis (Advanced Illness Value Set).
 - At least one acute inpatient discharge with an advanced illness diagnosis (Advanced Illness Value Set) on the discharge claim. To identify an acute inpatient discharge:
 1. Identify all acute and nonacute inpatient stays (Inpatient Stay Value Set).
 2. Exclude nonacute inpatient stays (Nonacute Inpatient Stay Value Set).
 3. Identify the discharge date for the stay.
 - A dispensed dementia medication (Dementia Medications List).

Dementia Medications

Description	Prescription
Cholinesterase inhibitors	• Donepezil • Galantamine • Rivastigmine
Miscellaneous central nervous system agents	• Memantine
Dementia combinations	• Donepezil-memantine

Administrative Specification

Denominator The eligible population.

Numerator

Identify the most recent BP reading (Systolic Blood Pressure Value Set; Diastolic Blood Pressure Value Set) taken ~~during an outpatient visit (Outpatient Value Set) telephone visit (Telephone Visits Value Set), e-visit or virtual check-in (Online Assessments Value Set), or a nonacute inpatient encounter (Nonacute Inpatient Value Set), or remote monitoring event (Remote Blood Pressure Monitoring Value Set)~~ during the measurement year. Exclude BPs taken in an acute inpatient setting (Acute Inpatient Value Set; Acute Inpatient POS Value Set) or during an ED visit (ED Value Set; ED POS Value Set).

The member is numerator compliant if the BP is <140/90 mm Hg. The member is not compliant if the BP is ≥140/90 mm Hg, if there is no BP reading during the measurement year or if the reading is incomplete (e.g., the systolic or diastolic level is missing). If there are multiple BPs on the same date of service, use the lowest systolic and lowest diastolic BP on that date as the representative BP.

Organizations that use CPT Category II codes to identify numerator compliance must search for all codes in the following value sets and use the most recent codes during the measurement year to determine numerator compliance for both systolic and diastolic levels.

Value Set	Numerator Compliance
<u>Systolic Less Than 140 Value Set</u>	Systolic compliant
<u>Systolic Greater Than or Equal To 140 Value Set</u>	Systolic not compliant
<u>Diastolic Less Than 80 Value Set</u>	Diastolic compliant
<u>Diastolic 80–89 Value Set</u>	Diastolic compliant
<u>Diastolic Greater Than or Equal To 90 Value Set</u>	Diastolic not compliant

Exclusions (optional)

~~Members who do not have a diagnosis of diabetes (Diabetes Value Set), in any setting, during the measurement year or the year prior to the measurement year **and** who had a diagnosis of polycystic ovarian syndrome, gestational diabetes or steroid-induced diabetes (Diabetes Exclusions Value Set), in any setting, during the measurement year or the year prior to the measurement year.~~

~~If the member was included in the measure based on claim or encounter data, as described in the event/diagnosis criteria, the optional exclusions do not apply because the member had a diagnosis of diabetes.~~

CPT® is trademarked and copyright 2020 by the American Medical Association. All rights reserved.

Hybrid Specification

Denominator

A systematic sample drawn from the eligible population.

Organizations that use the Hybrid Method to report the Hemoglobin A1c Control for Patients With Diabetes (HBD), Eye Exam Performed for Patients With Diabetes (EED) and Blood Pressure Control for Patients With Diabetes (BPD) measures may use the same sample for all three measures.

Organizations may reduce the sample size based on the current year's administrative rate or the prior year's audited, product line-specific rate for the lowest rate of all HBD indicators, EED and BPD measures.

If separate samples are used for the HBD, EED and BPD measures, organizations may reduce the sample based on the product line-specific current measurement year's administrative rate or the prior year's audited, product line-specific rate for the measure.

Refer to the *Guidelines for Calculations and Sampling* for information on reducing sample size.

Numerator

The *most recent* BP level (taken during the measurement year) is <140/90 mm Hg, as documented through administrative data or medical record review.

Administrative

Refer to *Administrative Specification* to identify positive numerator hits from administrative data.

Medical record

Organizations that use the same sample for the HBD, EED and BPD measures may use the medical record from which it abstracts data for the HBD and EED measures. If the organization uses separate samples for the HBD, EED and BPD measures, it should use the medical record of the provider that manages the member's diabetes. If that medical record does not contain a BP, the organization may use the medical record of another PCP or specialist from whom the member receives care.

Identify the most recent BP reading noted during the measurement year.

Do not include BP readings:

- Taken during an acute inpatient stay or an ED visit.
- Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests.
- Taken by the member using a non-digital device such as with a manual blood pressure cuff and a stethoscope.

Identify the lowest systolic and lowest diastolic BP reading from the most recent BP notation in the medical record. If multiple readings were recorded for a single date, use the lowest systolic and lowest diastolic BP on that date as the representative BP. The systolic and diastolic results do not need to be from the same reading.

The member is not numerator compliant if the BP reading is $\geq 140/90$ mm Hg or is missing, if there is no BP reading during the measurement year or if the reading is incomplete (i.e., the systolic or diastolic level is missing).

Exclusions (optional)

~~Refer to *Administrative Specification* for exclusion criteria. Identify members who did not have a diagnosis of diabetes, in any setting, during the measurement year or the year prior to the measurement year, **and** who had a diagnosis of gestational diabetes or steroid-induced diabetes, in any setting, during the measurement year or the year prior to the measurement year.~~

Note

- ~~• If an organization chooses to apply the optional exclusions, members must be numerator negative for at least one indicator, with the exception of HbA1c Poor Control (>9%). Remove members from the eligible population who are numerator negative for any indicator (other than for HbA1c Poor Control [>9%]) and substitute members from the oversample. Do not exclude members who are numerator compliant for all indicators except HbA1c Poor Control (>9%), because a lower rate indicates better performance for this indicator.~~
- If a combination of administrative, supplemental or hybrid data are used, the most recent BP result must be used, regardless of data source.
- When excluding BP readings, the intent is to identify diagnostic or therapeutic procedures that require a medication regimen, a change in diet or a change in medication. For example (this list is just for reference, and is not exhaustive):
 - A colonoscopy requires a change in diet (NPO on the day of procedure) and a medication change (a medication is taken to prep the colon).
 - Dialysis, infusions and chemotherapy (including oral chemotherapy) are all therapeutic procedures that require a medication regimen.
 - A nebulizer treatment with albuterol is considered a therapeutic procedure that requires a medication regimen (the albuterol).
 - A patient forgetting to take regular medications on the day of the procedure is not considered a required change in medication, and therefore the BP reading is eligible.
- BP readings taken on the same day that the patient receives a common low-intensity or preventive procedure are eligible for use. For example, the following procedures are considered common low-intensity or preventive procedures (this list is just for reference, and is not exhaustive):
 - Vaccinations.
 - Injections (e.g., allergy, vitamin B-12, insulin, steroid, toradol, Depo-Provera, testosterone, lidocaine).
 - TB test.
 - IUD insertion.
 - Eye exam with dilating agents.
 - Wart or mole removal.

Data Elements for Reporting

Organizations that submit HEDIS data to NCQA must provide the following data elements.

Table BPD-1/2/3: Data Elements for Blood Pressure Control for Patients With Diabetes
